I felt I came to an open spacious area with different size structures.

I felt there were people all around and I felt there was a recreational area nearby. I sensed water.

I sensed I came to something and it was workable with vibrations. I could sense movement up and down and I could sense a circular movement associated but it could not thrust forward.

At one point I sensed I was inside or looking at a bubble. I sensed a glassy covering. I sensed the workage of this was right in the center of the bubble. It was clinging sometimes and sometimes buzzing.

In the back, I sensed nothing much but only used sometimes. There could have been an opening back there.

I sensed along the sides there was panting or doors.

The front was where there was a big pointed object I was looking at.
